

FASTER, EASIER CAMO EDGE FASTENING

CAMO Edge Fastening is an innovative fastening system that is a faster, safer and easier way to fasten deck boards. It actually fastens into the edge of the deck board and into the joist. The system consists of guides, proprietary screws and drill bits that create a beautiful, fastener-free surface

that is "barefoot approved" for virtually any type of decking. It ensures a safer deck that won't rack or come up because it's fastened on both sides of the board. Simply load the proprietary deck screws into the hand-held guide that positions them to be driven into the edge of the deck boards and provide automatic gapping. Special driver bits are included with the screws to ensure depth of drive.

CAMO offers several guides including the Marksman Pro, Marksman Pro-X1, MarksmanPro-NB and the no-gap guide, Marksman Edge, which range in cost from \$20 to \$50. They work with any decking material—composite, PVC, and most soft and hardwood species, with variations to accommodate nominal 6-in. boards as well as narrow boards. CAMO also features a variety of spacing choices, including a no-gap option for treated wood decks that can also be used with secondary spacers when

wider gaps are desired. The company's comprehensive warranty not only covers the CAMO screws, but also the deck boards when installed with the CAMO system as an added assurance to the deck board manufacturer's warranty. If the deck boards are damaged by CAMO fasteners when installed following the manufacturer's installation instructions, CAMO will replace the damaged deck board.
