

CAMO fasteners approved for use by Deckorators

By [LBM Journal](#) - July 22, 2019

Grand Rapids, Mich. — Deckorators, a manufacturer of composite decking, has approved CAMO's EdgeClip and EdgeXClip fasteners for use with their grooved deck boards. CAMO Edge Screws are also on the Deckorators compatible fastener list, having previously been approved for use with their square profile deck boards. Manufactured by National Nail, CAMO fastener systems were designed with contractor input, the company says, to help quickly and efficiently fasten deck boards and achieve a fastener-free surface.

"We are very pleased that Deckorators has approved our CAMO Edge deck fasteners and clips for use with their innovative Deckorators composite decking product lines," said W. Scott Baker, CEO of National Nail. "We feel that contractors who use CAMO brands with Deckorators deck boards will benefit

from the improved installation experience and lasting performance of these two industry-leading innovations.”

“At Deckorators, we pride ourselves in providing a great decking experience to our partners and that includes installation options,” said Chris Camfferman, managing director of marketing, Deckorators. “We are therefore excited about adding CAMO EdgeClip and EdgeXClip to our list of compatible fasteners.”

CAMO says the new EdgeClip and EdgeXClip are engineered to reduce installation times, require no partial install and can fasten any type of grooved deck board including wood, capstock, or PVC. The EdgeClip is designed for 90-degree patterns and the EdgeXClip is designed for any angled decking pattern. A Never-Miss Guide is included in every pail of clips which makes fastening even easier so grooved boards can be installed in half the time. A new CAMO DRIVE stand-up tool with the clip guide has been designed for faster installation.

For square deck boards, CAMO’s Edge Fastening System uses a hand guide tool to drive proprietary fasteners into the edge of the board and joist on both sides, a process that CAMO says creates a more stable deck board with no visible fasteners on the surface. The CAMO DRIVE also has an edge fastening attachment for faster installation as well. To learn more about the CAMO EdgeClip and EdgeXClip, visit www.camofasteners.com/clips.

The approval for CAMO fasteners and clips can be found in the [Deckorators Resource Guide](#).
