[National Nail's](#) STINGER has partnered with the [Insurance Institute for Business & Home Safety's \(IBHS\)](#) FORTIFIED Home program, specifically highlighting the STINGER NailPac. The NailPac (1-inch plastic collated caps and 1 by .083-inch stainless steel ring shank nails for securing underlayment) seals out moisture and provides superior holding power in up to 150 miles-per-hour hurricane-force winds. Because of its performance, NailPac meets the standards required of a FORTIFIED Roof—a level of protection in the FORTIFIED Home program that ensures water will stay out of the house in the event of severe weather. As a program, FORTIFIED Home aims to protect and strengthen homes to reduce the risk of property damage and financial loss, and they do so by going beyond standard building codes.

“Contractors who build stronger, more resilient homes provide their homeowners with the best protection from high winds and heavy rains. We are excited to see manufacturers like National Nail respond to contractor needs and develop products like their STINGER NailPac to make building to the FORTIFIED Roof standards easier than ever,” says Fred Malik, managing director of FORTIFIED Products. “By providing FORTIFIED-compliant, corrosion-resistant nails and eliminating the hassle of hand-driving button-cap nails, roofers can more quickly deliver stronger roofs for homeowners.”

“We are honored to be one of the select brands to partner with FORTIFIED Home,” says Roger Szotko, STINGER product manager, National Nail. “The approval from FORTIFIED Home confirms that NailPac makes the installation of roofing underlayment easy for contractors, and it ensures strong protection against the elements.”

STINGER NailPac is designed for use with the STINGER CN100B Cap Nailer. The CN100B is a pneumatic tool that was engineered to secure underlayment with ease. Each 2000 count NailPac—which includes ten reels of 200 1-inch plastic collated caps and ten coils of 200 1- by .083-inch 304 stainless steel ring shank nails—will cover approximately 25 square feet dependent on installation instructions and/or building code requirements. STINGER also offers the CS150B Cap Stapler and StaplePac (1-inch

plastic collated caps and 1-1/4-, and 1-1/2-inch 18ga staples) for installing housewrap and foam board.

In addition to the FORTIFIED Roof designation, FORTIFIED Home also offers FORTIFIED Silver and FORTIFIED Gold. Each level provides increased home protection, allowing homeowners to choose a set of building standards that works with their budget and resilience goals.

Not all homes built using STINGER NailPac will qualify for a FORTIFIED Home designation. Homes require compliance with all FORTIFIED Home technical requirements and additional inspections. [For more information, please visit the FORTIFIED Home website.](#)
