NEW Products

Faster Deck Installation

The new CAMO Drive Tool is designed to address key challenges when building a deck, such as speed, ease of deck board installation, the absence of fastener versatility, and the affordability and lack of flexibility in deck fastening tools.

Installing decking at speeds up to five times faster than current methods, the tool allows the user to attach their own drill in a standing position. Of any grooved wood, capstock or PVC board, users simply insert the clip into the deck board groove, slide the next board or boards on, and then fasten the clip in one easy motion.
