### **CAMO® EdgeClip™ and EdgeXClip™ Approved for use by Deckorators® Composite Decking**

Grand Rapids, MI – Deckorators, a leading manufacturer of composite decking, has approved CAMO's EdgeClip™ and EdgeXClip™ fasteners for use with their grooved deck boards. CAMO edge screws are also on the Deckorators compatible fastener list, having previously been approved for use with their square profile deck boards. Manufactured by National Nail, these fastener systems were designed with contractor input to help them quickly and efficiently fasten deck boards and achieve a fastener-free surface.

"We are very pleased that Deckorators has approved our CAMO edge deck fasteners and clips for use with their innovative Deckorators composite decking product lines," said W. Scott Baker, CEO of National Nail. "We feel that contractors who use CAMO brands with Deckorators deck boards will benefit from the improved installation experience and lasting performance of these two industry-leading innovations."

"At Deckorators, we pride ourselves in providing a great decking experience to our partners and that includes installation options," said Chris Camfferman, Managing Director of Marketing, Deckorators. "We are therefore excited about adding Camo EdgeClip and EdgeXClip to our list of compatible fasteners."

CAMO's new EdgeClip and EdgeXClip are engineered to reduce installation times, requires no partial install and can fasten any type of grooved deck board including wood, capstock, or PVC. The EdgeClip is designed for 90-degree patterns and the EdgeXClip is designed for any angled decking pattern. A Never-Miss™ Guide is included in every pail of clips which makes fastening even easier so grooved boards can be installed in half the time. Use the new CAMO® DRIVE™ stand-up tool with clip guide for even faster installation.

For square deck boards, CAMO's Edge Fastening System uses a hand guide tool to drive proprietary fasteners into the edge of the board and joist on both sides, leaving a more stable deck board with no visible fastener on the surface. The CMO DRIVE also has an edge fastening attachment for faster installation as well.
