STINGER® NailPac® Cap Nail System for Fastening Roofing Underlayment Meets Requirements for Florida Product Approval

Grand Rapids, MI -- National Nail's STINGER®, its leading brand for roofing tools, cap fasteners and underlayment, announces that NailPac® collated cap nails for roofing underlayment meets requirements for Florida Product Approval (FL35349) under the [Florida \(DBPR\)](#) Department of Business & Professional Regulation and has previously met the Insurance Institute for Business & Home Safety's (IBHS®) FORTIFIED Roof™ program standards.

"NailPac has superior holding power and fastener coverage to secure roof underlayment, even in the worst conditions, for protection from the elements," said Zach Huth, National Sales Manager, STINGER. "With Florida Product Approval and FORTIFIED Roof compliance, NailPac is the best option for fastening underlayment."

Under the new standards, NailPac Electro-Galvanized cap nails help ensure roofing contractors and their customers that water will not enter the home, reducing damage during severe weather. Designed exclusively for use with STINGER's CN100B Cap Nailer, NailPac's caps seal out moisture and deliver superior holding power to secure underlayment in hurricane-force winds. Each 2000-count NailPac includes ten reels of 200 caps and ten coils of 200 nails.
